Specially designed lower bar clamp provides the option of 8 different back and forth positions in 5 mm increments. (Maximum)

One piece stabilizer is set by 4 special bolts. To securely mount handlebar, the clamp is designed to be tightened first with the 2 front side bolts, then the 2 rear side bolts.

Reinforcing ribs are positioned for maximized strength and minimized weight.

The one-piece upper bar clamp helps stabilize handlebar and prevents bar twist when falling down.

The two holes allow 2 back and forth positions of the handlebar clamp on the top clamp. Utilizing the optional lower clamp enables different handlebar height positions.

Front fork clamp area designed to securely clamp the front fork. Specially designed Front fork bolts are made of stainless to prevent corrosion.

Flex outward

- Quick and easy to adjust clutch play even during the ride.
- Provides the best lever position for any hand size.

- Hinge style clamp for easy and quick maintenance.
- Nylon sleeve placed between the clamp and handlebar allows the perch to rotate upon impact.

- Built-in return spring in the Pivot lever allows the lever to swing forward in the event of crash and prevents lever breakage.

Z-WHEEL

R50 RIM FRONT / REAR

- Real racing specification rim for ED and MX Racers.
- Made of A7050-T6 aluminum with special rim design for durability.
- Durable constructions yet light weight.
- Available wide rim lineup, latest competition bikes to older and dual sport models.
- Rims available for dual sport models, upgrade to high specification rims used by latest MX racing models.
- Available in Black, Silver, Burgundy Red, Prussian Blue and Green.

For the models with OE steel nipples, please replace them with Z-Wheel aluminum nipples.

Replace OE steel nipples with aluminum nipples to make our front and rear wheels weigh 150g lighter than OE wheels.

One hole each for rim lock and air valve on the rim.

Z-WHEEL ZIGRAM ROTOR

- Standard sized brake rotor developed for use under extreme conditions with off road riding.
- Thick design for improved strength.
- Made of high carbon stainless steel (SUS420) for better brake feel and corrosion resistance.
- Standard type is a light weight design with holes placed based on strength analysis.
- Mud type has a solid design to keep the mud away from the rotor and prevent frictional wear of brake pads in a muddy race.

STD ROTOR

MUD ROTOR

MUD SPECIAL

Reduce wear and tear on the brake pads.

Z-WHEEL
BRAKE HOSE

- PTFE inner brake hose covered stainless mesh provides better stopping power and sensitive control.
- PVC red and blue colored brake hose cover protects stainless mesh from rock and mud.
- Chrome plate coated brake banjo. Nut fitting design provides flexible brake hose installation.

- High quality light weight titanium bolts, nuts, washers and pivot pins available from ZETA.
- Brake disc bolt kit and sprocket kit available for specific models.
- Made of hot forged Ti-6AL-4V for a durable and extremely light weight-product.
- High precision CNC machined bolt and nut head, head size is one size-smaller than industrial standard for reduced weight.

Hot forging, CNC machining, thread rolling

ZETA titanium product is designed to be light weight with no decoration. Titanium products are not only machined but also hot forged to provide more tensile strength than material strength. Bolt and nut are designed with a smaller CNC machined head for a lighter design.

Titanium type and strength difference between other material.

Pure Titanium	Lower price than other titanium alloy, great corrosion resistance, but less strength.
Alfa alloy	Great creep resistance and welding work, but bad workability.
Beta alloy	Most durable titanium alloy, easy workability, but high production cost.
Alfa beta alloy	Great durability, ductility, toughness and workability. Zeta Titanium product is made of this material, Ti-6AL-4V.

Ti-6AL-4V

ZETA titanium products are made of Ti-6AL-4V. This chemical notation means this titanium includes 6% aluminum (AL) and 4% vanadium (V). This material is light weight and durable. It is used in aircraft and space industries, nuclear industry, industrial turbine, race car and motorcycle etc.

ZETA
RACING FLANGE BOLT

- One size smaller bolt head design for light weight. Motorcycle use.
- Comes with wire holes for bolts larger than M7 sizes.
- Sold in single pieces.

Application P76

ZETA
CAP BOLT

- Cap bolt available in straight and tapered types.
- Bolt head is forged, CNC finish.
- Sold in single pieces.

Application P76

ZETA
FLAT HEAD BOLT

- Countersunk bolt. 1pc.

Application P76

ZETA
STD FLANGE BOLT

- Standard size flange bolt.
- Sold in single pieces.

ZETA
EXHAUST NUT

- Titanium exhaust nut does not rust like OEM steel exhaust nuts.
- Flange design, can be tightend with 6mm wrench or hex wrench.

Application P76

ZETA
FLANGE NUT COMPACT

- Titanium compact head size nut.
- Attained one size smaller head design because of its durable and light weight Ti-6AL-4V material.
- Great to use in high tightening torque and high temperature situations.
- Sold in single pieces.

Application P76

ZETA
FLANGE LOCK NUT

- ZETA original locking function. No use locking plate or locking nylon used.
- Original locking function holds secure, but has less damage to the bolt than U lock nut.
- Sold in single pieces.

Application P76

ZETA
SPROCKET NUT SET

- Titanium sprocket flange lock nut set.
- One size smaller size nut head for reduced weight.
- Lighter than OEM sprocket nuts,
- Nut sizes available : M8, M10 and M12, comes in 5pc or 6pc sets.

Application P77

ZETA
SPROCKET BOLT & NUT SET

- Titanium sprocket bolt and nut set, lighter than OEM sprocket bolts and nuts.
- Rust and stain resistant due to passive film on titanium material.
- Sprocket bolt set and bolt & nut set available.

Application P77

ZETA

CHAIN ADJUSTER BOLT

- By using titanium bolts the unsprung weight is reduced, and compared to stock bolts, strength is increased and visual appeal is enhanced.
- Nut is designed one size smaller, for reduced weight and compactness. And because titanium bolts form a non-conductive coating on the surface, it will not rust.
- M8 is used by the four main Japanese manufacturers of off-road, and also some on-road manufacturers (Axle block bolt adjustment type vehicle).
- M10 is mainly used on KTM off-road models, and Husqvarna.

BANJO BOLT

- Titanium brake banjo bolts available for many sizes to fit most brake hoses.
- Light weight design, comes with wiring holes.
- 1.0 thread size banjo bolts for Brembo master cylinders and brake calipers.
- Sold in single pieces.

Application P76

ZETA

CALIPER MOUNT BOLT

- Light weight titanium caliper mount bolt kit for sport bikes.
- Bolt size is designed compact to reduce weight.
- Can be used for Brembo brake calipers.
- Wiring holes on the bolt to meet racing regulations.
- Comes with 2 bolts for rear brake calipers. 4 bolts for front radial brake calipers.

Application P76

ZETA

CALIPER BRIDGE BOLT

- Titanium caliper bridge bolt kit.
- Make your caliper weight lighter.
- Highly corrosion resistant, won't get rust like steel OE bolts.
- For Brembo 2 piece brake caliper use.
- Comes with 4 bolts.

Application P76

ZETA

PIVOT PIN

- Titanium Pivot pin for Brembo master cylinder.
- Stock pivot pin is made of steel, easily rusts, wears and can freeze.
- This titanium pivot pin does not rust and provides smooth lever movement.
- Gold anodized finish for exclusive look.

SIGNIFICANT LIGHT WEIGHT TITANIUM AXLE SHAFT

LIGHT WEIGHT

The specific gravity of Ti-6AL-4V is about 4.4. This is about 56 % with respect to the specific gravity of 7.8 of stock axle shaft using iron(SS400) and carbon steel (S45C), or chromium molybdenum steel shaft (SCM440). This means that if you manufacture the axle shaft in the same mass, 64 titanium will be able to produce about 44 % reduction. The reduced weight of the axle shaft also reduces the unsprung weight and corner approaches will improve the handling and stability. In addition, the reduction of unsprung weight will not only improve the movement of the suspension, but also improve brake performance.

ULTRA STRENGTH

Strength of Ti-6AL-4V is comparable to chromium molybdenum steel (SCM435) 900 - 930 Mpa. With the higher strength axle shaft, you will be able to feel more road surface information more directly. You will be able to sense the bumpy road that could not be felt until now.

BENDING

The Young's modulus of Ti-6AL-4V is about half of iron and chromium molybdenum steel at 106 Gpa. The Young's modulus represents the rigidity and elasticity, the higher the number, the higher the high rigidity. Generally, one thinks "high-strength = high rigidity," also 64 titanium has been taken for granted as high rigidity, but actually it is only half the rigidity of iron. Therefore it easily deformed, but there is elastic deformation where a material tries to return to its original state and plastic deformation where deformation is permanent. 64 titanium has a wide range of elastic deformation. In other words this is "BENDING". It is this bending that produces the suspension effect, and high strength that softly transmits road surface information.

Not only Light. Not only strong. Not only flexible. If it is made of aluminum or magnesium it will be lighter than 64 titanium but it will lack strength. If it is made of chromium-molybdenum steel and nickel-chromium steel it will be stronger than 64 titanium, but it will be heavy. There is also materials having Young's modulus lower than 64 titanium, but it will not mean that there is "BENDING." 64 titanium is superior to a balance of these materials. Therefore it may be said that it is the best material for the axle shaft.

Also we must not forget the appearance of titanium. It more difficult to rust than stock shaft and chromium-molybdenum steel shaft that has a protective surface treatment. However, it does not escape corrosion where the surface is compromised for some reason. Ti-6AL-4V forms a passive film surface to prevent semi-permanent rust to form.

1199S PANIGALE

YZF-R1

[Design]

Rounded edge design for less stress concentration and rigidity.

[Rigidity Balance]

Top bridge body is flexible when the bike is deeply banked for smooth front fork movement.

[Factory Look]

Recent light weight design used on Moto GP and WSBK race bikes.

[Light weight design]

Super light weight design, but still provides great rigidity balance. RSV4 stock top bridge weight = 534g, ZETA top bridge = 494g. ZETA is 40g lighter than stock RSV4 top bridge.

[Ti-6AL-4V bolt]

Clamp bolt is made of titanium for light weight and stable tightening torque.

Aim for fastest lap!

FUNCTION

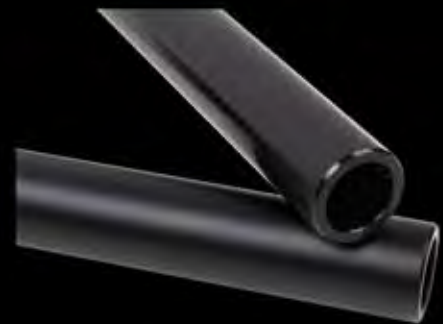

HIGH QUALITY

Made of machined A7009-T6 aluminum for light weight.
All bolts and pins are made of Ti-6Al-4V titanium.

CLAMP

Clamp attaching design for quick handle installation and removal.
Gap on the inner side of clamp provides better contact pressure.

HANDLEBAR

Throttle side has polished finish for smooth throttle control.
Clutch side has short peening finish for secure grip holding.

Handlebar adjustable system

Provides comfort or sport riding handlebar positions.

MOTO LED flashers may not work properly without optional parts.

DRC MOTO LED INDICATOR WIRING KIT

This kit is required when flasher operates like hazard indicators after the IC relay installation. Place these harnesses in-between the wires from the pilot lamp and the wires from the chassis.
 * Some models (*3) require this kit for proper operation.
 *3 ----- XR230, KSR110, KLX250, D-TRACKER-'07 etc.

Part number [D45-91-051](#)

DRC MOTO LED RESISTOR WIRE

When standard bulb flasher is replaced by LED flasher, electric consumption becomes low and stock flasher relay does not work correctly. This Resistor wire helps stabilize the electric power to the LED flasher from stock flasher relay.

- : Electric power consumption level is the same as with stock flasher.
- : Easy installation.
- : One resistor per flasher.
- * Some models (*2) require 2 resistors.
- : This harness will produce heat when used. Please install in areas where heat is not a problem.
- *2 ----- XR230, DR250R, DRZ400S/SM etc.

Part number [D45-90-710](#)

DRC MOTO LED IC RELAY for DC

Stock flasher relay is designed to work with standard bulb flashers. When the stock flasher is changed to LED flashers, the stock flasher relay does not work properly due to the difference in power consumption between the stock flasher bulb and the LED flasher. This IC Relay enables LED flashers to work in any configuration.

- * Some models require the use of the stock IC relay along with this IC relay. (*1)
- : Reduced electrical power usage.
- : Some technical skills required for installation.
- : One IC relay required for each bike.
- : Flasher pilot light can not be used with position light when installed on XR250.
- : If the flasher operates like hazard indicators after installation, Indicator lamp wiring kit is required.
- : Works on 12V DC.

Can not be used with WR250F/450F

*1----- RMX250S, DRZ400S/SM etc.

Part number [D45-69-830](#)

Installation of the LED flashers requires special knowledge and technique. Please contact your local dealer if you have any question upon installation.

Important note for using LED flasher

LED flashers have very low consumption and the stock flasher relay may not work properly. The most frequent problem, is that the LED may flash at a quick rate using stock flasher relays. Please refer to the chart below to choose our IC relay or Resistor wire for your installation.

	Electric consumption	Difficulty of installation	Parts cost	AC or DC
IC Relay	Low	Skills required	Cheap	DC
Resistor wire kit	Same as stock	Easy	Reasonable	DC/AC

* DRC IC Relay can not be used with motorcycles (XR50/100M, XLR250, WR250F/WR450F, XR650 etc) due to the AC power design. Please use Resistor wire kit for AC power motorcycle.
