

MX & ENDURO 2017

HISTORY

Ever since the company was founded in 1976, Öhlins has represented the very pinnacle of suspension technology and firmly rooted itself as an intricate part of the motorsport industry, underpinning countless world titles. That very technology has subsequently been adopted not only as the gold standard of aftermarket suspension, but is also by car and motorcycle manufacturers around the world.

Back in the 1960's, Kenth Öhlin was an up-and-coming motocross rider and showed an innate talent for mechanics. He knew how to bring the best out of his material and soon he saw himself engaged in modifying his competitor's bikes. By the time he started his business he had already designed exhaust pipes, engines and – of course – shock absorbers.

Öhlins soon became synonymous with advanced suspension. The products were not only superior in terms of technology, but as Mr. Öhlin was, and is, a very meticulous man the quality was always outstanding. The first world championship was won already in 1978, as Russian Gennady Moiseev took the 250cc title on an Öhlins equipped KTM. Since then, more than another 300 world titles have followed. The success continued in road racing and soon also in the automotive segment, in racing as well as in rally, all adding to the motorsport pedigree. But don't think that Öhlins was content, not for a minute. The company continued to grow, adding electronically controlled, semi-active suspension to its portfolio under the trademark CES. Today, this technology has revolutionized the car industry and can be found in a wide range of products from premium car manufacturers.

In the 1980's, Öhlins' achievements got the attention of industrial giants and in 1987, Öhlins was acquired by Yamaha. Under the Japanese ownership, Öhlins had the necessary financial stability to develop into a dominating player in the industry. Twenty years later, Öhlins was considered better off on its own legs and Kenth Öhlin regained the company he once had started.

PRODUCT OVERVIEW 2017

THE CHOICE FOR YOU

Tailor made for you! We have the perfect part for your bike, delivering outstanding performance at a competitive price. Öhlins manufactures more than 300 different shock absorber models, every one uniquely fitted to your bike and suited to fit without interfering. We make sure that the product behaves the way it should, through the design of the shim stacks and valves as well as the calibration of the adjusters. This is no guesswork. We try the settings out, in real life, and adjust them until everything works perfect for each and every specific model. Then we assemble the products with utmost precision to ensure superior control of the damping force. That is the key to our success.

SHOCK ABSORBERS

TTX FLOW SHOCK ABSORBER

The brand new TTX Flow allows you to ride fast and safely with improved traction, stability and grip. Developed for racers, this shock is also recommended for those who want to ride on the golden Öhlins suspension and really feel the difference. The TTX Flow calms down the chassis and that keeps you focused to set fast lap times and win races.

We started with a clean sheet of paper in designing this new ground breaking shock absorber. With our TTX Technology and patent pending internal pressure regulation, this new shock is a huge step forward compared to previous models. You will feel that the response is quicker, more consistent and more predictable than ever before, allowing the TTX Flow to deliver a smoother roll on bumpy terrain which calms down the chassis for corner entry and eases the bikes handling through turns. It's almost like the TTX Flow shock absorber is communicating while you're racing, sensing your next move!

Without any trade-offs, the TTX Flow excels in all areas compared to previous models. The TTX Flow gives the bike improved traction, comfort and predictability which enhance the stability of the bike. It's also easy to adjust to find the perfect setting for the track and riding style. The result is clearly felt by the rider when cutting seconds from previous lap times and still riding in the safest way possible.

FEATURES

- > TTX-technology
- > 46 mm piston and 16 mm piston rod
- > A new 58 mm gas reservoir on majority of applications
- > Patent pending pressure technology
- > Improved bottoming resistance through new design of bump rubber cup
- > Compression and rebound adjustments with indicator
- > Easy and cost effective to service
- > Easy spring change due to new spring clip design
- > Easy spring preload adjustment
- > Wide range of springs

TTX

NEW!

STX 46 SHOCK ABSORBER

An updated 46 mm shock absorber from Öhlins, perfectly suited for 85cc bikes and OE applications. There's always been a 46 mm off road shock absorber in the Öhlins line-up but for 2013 it was updated with new valve technology and some retuning by Öhlins R&D. The result is the Öhlins STX 46.

Compared to previous 46 mm models the STX is updated in many areas, resulting in developed dynamics of the shock absorber which the rider will be able to feel, giving the rider a better function in every way possible. The PDS – Progressive Damping System – function has also been updated to better control the forces the shock absorber is subject to. Rebound damping adjustment is also available as well as spring pre-load adjustment. A wide range of springs are as always available to choose from.

FEATURES

- > STX-technology
- > Two way compression adjuster
- > Wide range of low speed compression adjustment, 3 click high speed
- > Improved dynamics, equals better function
- > Updated PDS function

STX

TTX 30 SHOCK ABSORBER

Öhlins are proud to offer a new family of shocks for the 50 & 65 cc MX-bikes – The Öhlins TTX 30.

Thanks to the small diameter the TTX-technology can be brought in a small package to fit these bikes. Having good suspension, as good as the GP-racers, is vital when you start out and start honing your race craft and speed. A comfortable performance driven shock absorber means the rider can use less energy to go fast, giving better control, higher safety and of course in the end more energy towards the end of the race to fight for the victories. As on all Öhlins products the TTX 30 is serviceable so you can keep the performance of the shock absorber over a long period of time and last the life time of the bike if not longer.

FEATURES

- > TTX-technology
- > No cavitation risk
- > Compression and rebound damping adjusted separately
- > Different spring rates available
- > Full maintenance and service capability

TTX

FRONT END PRODUCTS

RXF 48 RACING FRONT FORK

The Öhlins 48 mm front fork is loaded with the latest Öhlins front fork technology with gold anodized outer tubes and black coated inner tubes. Our aim is to provide a fork stable enough to give confidence for racing, but still with that plush and gentle touch and feel. Continuing from our 2014 product with internal top out springs, we have continued ABD improved our settings for every year model. Our check-valve unit helps the fork to stay up in stroke without feeling too hard, which also improves the overall performance of the front fork.

The front fork has been chosen to be hard enough to resist stones but is still solid enough to prevent corrosion. The front fork also comes with protective stickers for the outer tube to protect the outer tube all way up to the lower clamp.

This is the very latest MX & Enduro front fork technology from Öhlins.

FEATURES

- > TTX-technology
- > Gas pressurized damping system for immediate damping response
- > External compression and rebound adjusters
- > Effective hydraulic stops for great bottoming resistance
- > Top-out springs and rubbers for smooth feeling at full extension
- > Inner tube surface treatment, gives low friction
- > Long outer tube sticker to protect the outer tube from rocks
- > Designed to be used with Öhlins fluids
- > Re-designed plastic guide sleeves for less fork guard wear

TTX 22 CARTRIDGE KIT

It's the inside that really counts! If you want to keep your front fork legs but still upgrade to Öhlins TTX, just pull out the standard inserts and pop in this powerful TTX 22 cartridge kit from Öhlins R&D. The same kit we fit in the Öhlins Front Fork, based on the Öhlins TTX-technology, is also available as a stand-alone cartridge kit for all major models. The TTX-technology brings a positive pressure balance in the system, thanks to the twin tube technology. The gas pressurized dividing piston inside pushes the hydraulic fluid back into the low pressure side and the end result is better improved performance and no more cavitation.

The kit is lighter thanks to an 8 mm steel hollow shaft and the main piston diameter is 22 mm. All other details are made in aluminum. Settings are constantly improved and a new one-way rebound valve was recently introduced which improves the performance and gives better front wheel control. Available for most major models on the market.

FEATURES

- > TTX-technology
- > Gas pressurized damping system for immediate damping response
- > External compression and rebound adjusters
- > Effective hydraulic stops for great bottoming resistance
- > Springs are ordered separately to suit rider's choice of rate
- > Top-out springs and rubbers for smooth feeling at full extension
- > Available for all major MX and Enduro models

STX 22 CARTRIDGE KIT

For 85cc bikes, Öhlins has developed a cartridge kit based on the TTX 22 cartridge kit for the bigger bikes.

These kits are designed based on the Öhlins TTX 22 cartridge kit for the bigger bikes and share a lot of features with them and the experience they have from top level racing around the world. As such it's one of the most powerful cartridge kits available for 85cc bikes. This kit has been designed to rise very low above the fork leg ends, thus allowing the forks to be mounted far up in the triple clamps with a small clearance to the handlebars. This allows for lower bikes for the smaller riders in the class. Click adjusters and air breather are easily reachable as they are angled out from underneath the handlebar. The kit is also designed to achieve a quick and continuous response in the damping which directly slows down upcoming motions without harshness. It has a very reliable and constant damping characteristic in every stroke and during the whole race so the behavior is predictable and consistent.

FEATURES

- > STX-technology
- > Efficient hydraulic stop for improved bottoming resistance
- > Adjustable compression and rebound
- > Spring pressurized system to compensate for heat changes and provide reliable damping behaviour
- > Wide range of springs
- > Springs must be ordered separately

SPRINGS ACCESSORIES

One of the most important aspects of tuning the suspension of the bike to your weight and riding style is to choose the correct spring. Öhlins offer a wide range of springs, not only for our own shock absorbers and front forks but also replacement springs for standard applications. Depending on use, different lengths and spring rates are available.

Öhlins experienced service centers are happy to help you in making the correct decision, as well as installing the springs.

FLUIDS ACCESSORIES

Needless to say, the fluid used in the shock is a crucial part of the performance. Leaving nothing to chance, we develop our own suspension fluids, using the more precise Centistoke scale of viscosity rather than the conventional SAE scale. But to help you out a little bit if cSt is not your thing, we did put a small number on the lower right corner of the bottle, to make a reference.

Made with the same precision as other Ohlins products, we believe that our fluids not only do the job of bringing the best out of our shocks.
